

Number	POP7
Indicator name	Built areas
Area	P
Indicator definition	Podíl rozlohy zastavěných ploch z celkové rozlohy administrativního území města
Indicator unit	%
Key words	development, built-up area, territory
Reason for tracking and usability	The proportion of the built-up area has an influence on the ecological stability of the area and it can be used to compare cities. The share of the built-up area defines the possibilities of the city in adaptation to the impacts of the climate changes. The indicator is important for monitoring the d
Completeness, representativeness, validity	The indicator does not indicate the character, type, composition, age and other parameters of the built-up area. It can be used for comparison over time and recalculated to other specific indicators. It is advisable to monitor more detailed indicators additionally.
Description of data processing	The total area of built-up areas and courtyards shall be divided by the total area of the administrative territory. If the already calculated value is included in the source, it shall also be verified by calculation.
Data source	Bureau of Statistics, own data
Tracking frequency	In urban and municipal statistics, it should be monitored annually. For KLIMASKEN, the periodicity is assumed to be 2-3 years.
Urban influence	The city can influence the built-up area through spatial planning.
Presentation method	Tabular value
Responsibility	Processor KLIMASKEN, city, city district, municipality
